

Micah Boswell

Lead Product Designer

Dallas, TX • 214-543-2098 • micah@conscious-shell.com • conscious-shell.com • linkedin.com/in/micahboswell

I turn complex systems into things people can actually use. At AT&T I introduced AI design processes to our product design group, I prototype AI agents that show their evidence and ask before they act, and I built an agentic pipeline that produces on-brand product-demo films. Before that I designed for work where mistakes are expensive: role-based dashboards for GE Nuclear under federal compliance, and grid dashboards used in the Hurricane Harvey response at Treverity, with field apps that worked offline. Thirty years of enterprise product design. Fluent in Spanish.

EXPERIENCE

Lead Product Designer • AT&T

2021 - Present

- Introduced AI design processes to the product design group: led the enterprise Lovable AI pilot, built its templates and playbooks, and ran UX education for teams bringing AI into their work.
- Framed an agentic model for network operations, with agents that provision, diagnose, optimize, and decommission infrastructure, and prototyped its NetBond agent. The prototype shows its evidence, proposes a fix, and waits for the customer. Auto-resolve is off by default.
- Designed the assistant for a cloud networking portal prototype. It answers from live data, shows each change with Do it and Cancel buttons before acting, and keeps approvals in a plain-language audit trail. Wrote the spec for plugging another team's assistant into every screen.
- Designed a visual network designer that unifies global, topology, and circuit views of an enterprise network in one interface, built to replace a patchwork of separate tools. Patent pending (AT&T).
- Built an agentic video pipeline for product demos: a Claude Code skill and toolkit that scripts, narrates, animates, and masters narrated films, with AT&T brand standards (Aleck Sans, Flywheel tokens, the approved icons, the sonic sting) as a switchable profile and automated checks on every cut. Four films delivered in September 2026, including an AT&T executive film.
- Built the Insight Engine POC: AI extracts cited, confidence-rated findings from research decks, a researcher approves each, and a PM gets a cited answer. Handed to AT&T's Power Platform team in July 2026.
- Redesigned DNI Portal diagnostics to surface underused hardware, saving \$300K+ through targeted decommissioning. Built VLAN migration and triage tools that cut resolution from weeks to minutes.
- Secured roadmap approval for NetBond SDCI with an executive prototype, and partnered with API engineering and global marketing on API productization.

Founder and Designer, AI Products • Own products

2025 - Present

- Built Roots (familyroots.center), a paid family-history product with an AI family historian on Claude, and a 13-agent research workflow that scored 93/100 against a DAR-accepted lineage record.
- Built Helen, my personal operations agent: a 71-tool TypeScript MCP server that gives every Claude session shared memory, my writing vault, mail, messages, and files, and backs 21 scheduled tasks behind human gates.
- Run live agents daily with a human gate: Pen & Paper curation that publishes in English and Japanese only with a cited source per field, job and client-support agents, and public MCP servers for my sites.

CX/UX Design Lead • Wells Fargo (via Granite Solutions)

2020 - 2021

- Aligned product strategy across eight departments that had never shared a design language, delivering journey maps, wireframes, and design templates.
- Built the first cross-department component library for consumer products: one shared source in place of eight competing ones.

Mentor and Instructor Advisory Board · CareerFoundry 2020 - 2025

- Mentored 47 emerging UX and UI designers one-on-one in systems thinking, context-driven design, and career resilience, and shaped curriculum on the Instructor Advisory Board.

VP Experience Design · Treverity 2016 - 2020

- Built and ran design ops for 20+ energy-grid products, with modular design libraries tied into development workflows.
- Designed control-room dashboards used in the Hurricane Harvey emergency response, plus field apps that worked offline.
- UX work was material to the company's acquisition by ARCOS.

Senior UX Architect · Citi 2016

- Redesigned 68 mobile payment workflows for tap-to-pay across Latin America, Asia, and the U.S., with a pattern library dense enough to preempt most offshore questions.

UX Consultant · GE Nuclear 2013 - 2016

- Proposed and led the unification of hundreds of legacy Fortran apps into role-based dashboards, cutting errors 48% with federal compliance intact.
- Created the design system, asset libraries, and rapid-prototyping process, and integrated lean UX with Agile/Scrum.

Director, UX Strategy · U.S. Mint (via PFSweb) 2013 - 2014

- Interviewed buyers, wrote five personas, and authored the first persona-driven e-commerce strategy for a government retailer. Cart abandonment fell 31% and revenue rose 20%.

EARLIER

Senior UX Designer, Hitachi Vantara. Portal style standards across eight style guides. 2012 - 2013

Senior UX Architect, The Richards Group. Pier1.com e-commerce architecture. 2012

UX Architect, Dell (via Possible Worldwide). Dell.com search rebuilt around customer intent. 2011 - 2012

Creative Director, Broadlane. Branded 21 products; design credited in the MedAssets sale. 2005 - 2010

Interactive Art Director, Perot Systems. Hospital sites for Tenet and Catholic Healthcare West. 2002 - 2005

Healthcare Design Lead, IMC2, NCH, GlaxoSmithKline. Interfaces for Eli Lilly, the ADA, and GSK. 1998 - 2002

SKILLS

AI and agentic UX	Autonomy and permission design, human-in-the-loop approvals, audit trails, conversational assistants, LLM tooling, MCP
Systems	Design systems, component and pattern libraries, design tokens, style guides, design ops
Research	Interviews, personas, journey maps, usability testing, heuristic evaluation
Prototyping	Figma, TypeScript, HTML/CSS, Claude Code, Lovable; interactive and working-code prototypes; narrated product films with Remotion and ElevenLabs
Accessibility	Contrast and color-blind safety; built chart-color-audit, an open-source checker on npm

EDUCATION AND RECOGNITION

Education B.A., Hardin-Simmons University, Abilene, TX. eCornell certificates in AI Strategy, AI for Business Productivity, and AI Applications and Value Creation (2025-2026).

Recognition Patent pending (AT&T): graphical user interface for multi-abstraction network topology design. AT&T Connection Award, 2022-2025. Best Speaker, Ignite, 2012. Author of A Guide to Data-Driven Design. Photographer with 53M+ views on Unsplash.

Languages English and Spanish (fluent, raised in Lima, Peru)
